CHIC POST- SYMPOSIUM ENGAGEMENT

In continuation of East Africa and West Africa Symposium

07 August 2024

Trend and steps in improving HPV vaccination coverage

HPV Vaccine Coverage S1:2024

	9year females	9 year males
Adam	30	18
Center	5	3
Est	33	19
Far N	53	28
Litt	10	5
North	51	35
North W	10	7
West	2	1
South	8	4
South W	14	9
Cameroon	22%	15%

- 2020: Onset of HPV vaccination (9-year females)
 - Performance remained low (dose 1:<20%, dose 2: 6%)
- 2022: Single dose protocol & vaccinating females & males 9 years old (Cameroon's NITAG, 2022)
- Strengthen collaboration and communication
 - Min. Basic Education, OBS/Gyns, Schools, religious groups, CSO, & interpersonal in communities
- 2023: Gender neutral, integration in all RI activities and PIRI
 - 2023 coverage*3: females 66% and males 34%

2024

- Lower coverage (challenge of routine immunization)
- Strategies
 - Vaccination of adolescents 9-15yrs living with HIV
 - Integrate in Big Catchup
 - MAC request being finalized
 - Target 10 to 18yr
 - Three-phase campaign approach in 3 yrs
